TFORMer

Client and Server Reporting Software

Unified Output across Operating Systems, Applications, Printers and Output Formats

```
// supply file name to TFORMer
TFORMer.PrinterName = "PDFFILE:c:\\Output.pdf";

// assign DataSource
TFORMer.DataSource = recordSet;

// and finally generate output
TFORMer.Print();
```

In Excellent Form

The *TFORMer* product family represents a smart and ready-to-use tool for printing forms, reports, lists, labels and serial letters. The cumbersome manual implementation of output functionality is eliminated completely.

The required documents are created with the layout editor *TFORMer Designer*. *TFORMer Runtime* is then used to generate the output in perfect quality as part of your application.

Visual Document Layouts

Document layouts are created with the graphical user-interface *TFORMer Designer*. The design process is straight-forward and takes advantage of numerous ready-to-use form templates. Test your document drafts with actual data and output them in arbitrary formats.

Freely formatted text, graphics, barcodes, UNICODE, embedded computations; conditional printing, adjustable form sizes and the integrated tray-control cover all possible requirements.

End-users benefit from the clear user-interface of *TFORMer Designer*. Even your customers are able to design or modify form layouts by themselves.

Printed Programmatically

Just a few steps are required to embed *TFORMer Runtime* as DLL, as shared library, as COM component, as .NET assembly or as stand-alone process into your application. Your program code provides the actual data for the form layout. This is done directly or via external data sources.

The resulting printouts, PDF documents, Images, HTML, ZPL-II or PostScript® files are of exceptional quality. The generated output is always identical – completely independent from the chosen output format.

Without Layout Programming

TFORMer generates documents without the need of programming the style and position of single elements. The created output is based on a graphical design. Any formatting logic is encapsulated within the form layout.

For All Platforms

TFORMer Runtime is available for all major operating systems like Microsoft® Windows®, UNIX® and Linux®. All supported output formats are integrated into *TFORMer* directly. Additional third party licenses are not required.

Highlights

General Features
- *Graphical Layout-Editor*
- *UNICODE Support*
  Supports Asian and Eastern European Fonts
- *Ready-To-Use Templates*
  Automotive, Transportation, Logistics, Military
- *Integrated Barcodes (Linear, 2D, Composite)*
- *Data is separated from the Layout*
- *Database independent*
- *Tray-Control, arbitrary Paper Formats*

Developer Benefits
- *Client Side Reporting (even within the Browser)*
- *Server Side Reporting*
- *Reporting Component for all Operating Systems*
- *All Programming Languages*
  Lean DLL/COM/.NET/EXE/Library Interface

Output Features
- *Direct Printing*
- *PDF, PostScript, HTML, Image and ZPL-II Export*
