Distributed Teamwork

Plan Activities & Track Issues

Plantivity offers a competitive edge by facilitating distributed teamwork with task planning and issue tracking features.

Both project managers and team members, regardless of their location, benefit from a central database that stores job-related task or issue descriptions in a structured way.

Customizable Organizational Structure

Users are assigned to workgroups on demand. Project managers predefine the organizational structure of tasks and activities within such workgroups. Team members are still able to classify their tasks on a more detailed level.

Traceability Included

Distributed teamwork is automatically inline with possible auditing requirements. Once an issue or activity has been entered in Plantivity each change is recorded on a per-user base.

Easy-to-Use Web-Interface

Only a web-browser is needed to work with Plantivity. No additional client-software and plug-ins are required. Users may adjust the user interface to meet their personal requirements. Powerful search and reporting functionalities assist daily work.

BMW Group

BMW Group and its suppliers collaborate closely in the areas of research, development, production and marketing. Team members are spread out over different BMW facilities and numerous 1st, 2nd and 3rd tier partners.

Distributed teamwork strongly increases communication requirements. Conventional methods (like email or spreadsheets) used for coordinating tasks in such a scenario prove ineffective very quickly.

Plantivity enhances communication by offering
- guaranteed security and confidentiality
- structured information
- traceability
- and automatic archiving functionality

Plantivity is available as a central task-store that is integrated seamlessly into the B2B-portal of the BMW Group. BMW employees as well as external partners take advantage of the application.

All information is available via a web-browser. Suitable security measures ensure that information of unrelated workgroups is shielded from each other. Participating users benefit from the undiminished traceability features built into Plantivity.
